SUMMARY

Full-stack developer who ships production applications end-to-end and is comfortable owning the full path from schema design to deployment. Currently a software engineer on a live AI-certification platform, building and securing features with a remote team. Also built a real-time investor-entrepreneur platform, a prediction-markets dashboard, and a secure study platform, all live in production.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Node.js, C++, Python, SQL

Frameworks: React, Next.js (App Router), Express.js, Tailwind CSS

Data: MongoDB / Mongoose, MySQL, Prisma ORM, SQLite (WAL) & Turso (libSQL), Redis

Real-Time: Socket.IO, WebRTC (P2P calls + signaling), Server-Sent Events

Backend & Auth: REST APIs, Clerk, JWT in httpOnly cookies, bcrypt, OTP 2FA, cron workers, rate limiting

DevOps & Testing: Vercel, Render, Turso, Upstash, Bunny CDN, GitHub Actions CI, Git, Jest, Playwright, live-deployment smoke tests

EXPERIENCE

Software Engineer, Global AI Certification Council (GAICC) | Remote (Part-time) | Jun 2026 - Present

- Build and ship features for GAICC's AI-certification learning platform (Next.js App Router, TypeScript, Tailwind, Prisma/MySQL, Clerk, Bunny Storage, Vercel), working remotely with the team through a PR and staging-review process.
- Built the company's internal documentation portal from the ground up, with server-side role-based access for four user roles, Clerk single sign-on shared across the org's subdomains, and an admin CMS for managing departments, sections, and documents.
- Owned the security side of the portal: a Content-Security-Policy, rate limiting, a same-origin file proxy that keeps private files from being accessed directly, and audit logging of admin actions.
- Fix bugs and add features across the main learning app (admin tooling, email notifications, mobile layout), and am currently building a platform-wide leaderboard and an automated database-backup job.

Full Stack Developer Intern, Developer Hub Corporation | Apr 2026 - Jun 2026

- **Nexus, Investor & Entrepreneur Platform** (React, TypeScript, Node/Express, MongoDB, Socket.IO, WebRTC): JWT auth with role-based investor/entrepreneur dashboards, meeting scheduling with double-booking conflict detection, a document chamber with canvas e-signatures, and a mock payment wallet with transaction history.
- Built peer-to-peer video and voice calls over WebRTC with a Socket.IO signaling server (offer/answer/ICE relay), TURN fallback, and automatic ICE-restart recovery on high-latency or firewalled networks, plus real-time chat and presence. Live: [nexus-pearl-nu.vercel.app](#)
- **eCommerce Application** (React, Node.js + Express, MongoDB): JWT auth with protected routes and a role-restricted admin panel for product CRUD, REST endpoints for listings, cart, and sessions, and a responsive Tailwind UI built to Figma specs; deployed to Vercel/Render.

PROJECTS

PolyWatch: Real-Time Prediction Markets Dashboard

Next.js | TypeScript | MySQL | Prisma | Redis | SSE

- Live dashboard pulling Polymarket data with user watchlists, price-cross alerts, and per-market price charts streamed to the browser via Server-Sent Events.
- Redis caching cuts upstream API calls 90%+; JWT auth in httpOnly cookies, bcrypt, and Next.js middleware enforcing CSP and security headers.
- Automated Node smoke-test suite validates auth flow, API contracts, and security headers against the live deployment.
- Live: [polygazeio.vercel.app](#)

ExamPrep: Full-Stack Study Platform

Node.js | Express | better-sqlite3 / Turso | JWT | Vercel

- Sequential day-by-day curriculum unlocking, per-student progress tracking, and an admin panel for managing users and content.
- Re-architected for serverless on Vercel: async dual-backend data layer runs better-sqlite3 (WAL) locally and Turso (libSQL) in production, so deploys never touch user data.
- JWT in httpOnly cookies, bcrypt (cost 12), CSP-hardened front-end, Helmet + per-route rate limiting, /healthz uptime endpoint.

- Live: exam-prep-platform-sandy.vercel.app | Demo: demo@examprep.com / demo2026

Al-Hamd Granite & Marble: Production Business Website

HTML5 | CSS3 | JavaScript | WhatsApp Business API | SEO

- Live B2B site generating qualified leads for a marble supplier; vanilla-JS product catalog with category filtering and one-tap, pre-populated WhatsApp Business API inquiries, SEO-indexed.
- Live: alhamdgranitemarble.com

EDUCATION

B.S. Computer Science, FAST NUCES, Karachi | 2024 - 2028 (Expected)

Cambridge International A Levels, TCS PAF Chapter, Karachi | 2023
